

Product catalogue

Probing & Tool Breakage

Touch probes, tool setting and tool breakage detection that let the machine measure the part and check the tool inside the machining cycle.

Technology from

TSCHORN · MARPOSS

Why probe on the machine

Measure in the cycle, not after it

Probing moves setting and checking into the CNC program. The machine finds the part, sets its own offsets and confirms the tool is intact, with less manual intervention and less risk of scrap.

Faster setup

Work offsets set by the probe instead of by hand.

In-process checks

Measure features before the part leaves the machine.

Tool security

Detect a broken tool before the next operation.

Unattended running

More confidence to run lights-out and long batches.

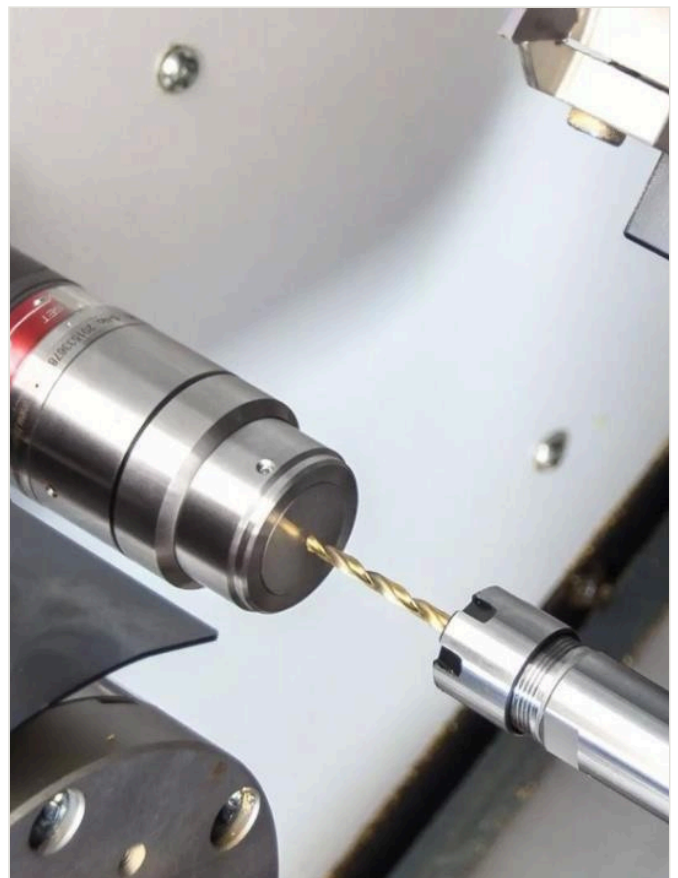

Probing in the machine

For turning and machining centres

Tool-setting arm on a turning centre

A swing-down arm next to the chuck measures tool offsets inside the machine.

Probing in the machining cycle

Workpiece and tool measurement integrated into the CNC program.

Tool setting and breakage

Know the tool length and condition

Tool setting

Measures tool length on the machine and updates the offset.

Contact tool breakage sensor

Checks the tool by touch after the operation.

Tool check on the table

A table-mounted probe confirms tool length and condition between operations.

Tschorn probing and clamping technology

Made in Germany

Tschorn tools for setting up and checking on the machine and on the bench, together with clamping technology.

Probing technology

- Probing systems
- 3D testers, including the tactile MP200
- Edge finders, optical and mechanical
- Zero setters

Clamping technology

- Stops and clamping systems
- Automation and assembly
- Tool holders and partner products

To quote quickly, send us

- ☐ Machine make, model and CNC control
- ☐ Machining centre or turning centre
- ☐ What to measure: part location, features or tools
- ☐ Tool sizes for setting or breakage checks
- ☐ Preferred signal transmission, if known

Measuring & Test Equipment

Granite plates, clamp force and ATC alignment gauges

Tool Holders & Pull Studs

BT, BBT and HSK holders; pull studs for all common standards

Machine Services

Calibration, reconditioning and retrofit

How we work

From selection to support

01

Select

We review the part, the machine and the problem, and recommend the right product.

02

Supply

Equipment from established manufacturers, configured for your machine.

03

Install

Support with mounting, integration and first use on your shop floor.

04

Support

Service, spares and help when production needs change.

Start with the problem

Tell us what the machine or the part needs. We work back from the problem to the product, not the other way round.

One partner around the machine

Workholding, tooling, probing, chip and coolant handling, and machine services from one engineering team.

Established manufacturers

Products from specialist manufacturers, selected and supported locally from Bengaluru.

Talk to an engineer

Send a drawing, a photo of the machine or a short description of the problem. We will come back with the right solution.
