

Product catalogue

Chip Conveyors

Move swarf away from the cut with a conveyor matched to the chip, the coolant and the machine. Standard and special conveyors for machine tools and production lines.

In this catalogue

1. Choosing a conveyor
2. Chip conveyor types
3. Special conveyors
4. Enquiry and contact

Choosing a conveyor

The chip decides the conveyor

Chip shape, material, quantity and the coolant all decide which conveyor works reliably. The wrong type jams, carries coolant out of the machine or leaves fines in the tank.

What we look at

- Material: steel, cast iron, aluminium, brass
- Chip form: long and curly, short, fine or sludge
- Chip volume per hour
- Coolant type and how much must stay in the machine
- Machine chip outlet and discharge height
- Bin or central chip handling at the discharge end

Chip conveyor types

Standard range

Type	Typically used for
Hinged belt conveyor	Steel hinged plates carry chips out of the machine. A common choice for long, curly and mixed chips from turning and milling.
Magnetic conveyor	Magnets under a stainless steel deck move ferrous chips. Suited to small ferrous chips and cast iron.
Screw conveyor	A rotating screw moves chips in a compact trough, where space inside the machine base is limited.
Scraper (wiper) conveyor	Scrapers drag fine chips and sludge along the conveyor. Used for short chips, aluminium and cast iron.
Scraper conveyor with drum filter	Adds a drum filter so fine particles are separated from the coolant as chips are removed.
Spiral conveyor	A flexible spiral moves small chips through a tube, for compact layouts.

Special conveyors

Conveyors for parts and production lines

Beyond chip handling, conveyors move components between machines and through processes.

Belt conveyor

Roller conveyor

Job conveyor

Feeding conveyor

Quenching conveyor

Centralised conveyor

Roller conveyor and chip conveyor with bin

Chip conveyors for machine tools

Matched to the machine outlet

Each conveyor is matched to the machine's chip outlet, coolant tank and the discharge height needed at the bin.

Send a photo of the chip outlet and the machine model with your enquiry.

Chip handling does not end at the conveyor. Coolant carried out with the chips can be recovered, and the chips themselves can be compacted into briquettes. See the Coolant, Sump Cleaning & Filtration and Chip Compactors catalogues.

To quote quickly, send us

- ☐ Machine make and model, or a photo of the chip outlet
- ☐ Material and chip form
- ☐ Approximate chip quantity per shift
- ☐ Coolant type: oil or emulsion
- ☐ Discharge height and direction
- ☐ Conveyor length, for special conveyors

How we work

From selection to support

01 Select We review the part, the machine and the problem, and recommend the right product.	02 Supply Equipment from established manufacturers, configured for your machine.	03 Install Support with mounting, integration and first use on your shop floor.	04 Support Service, spares and help when production needs change.
---	--	---	---

Start with the problem

Tell us what the machine or the part needs. We work back from the problem to the product, not the other way round.

One partner around the machine

Workholding, tooling, probing, chip and coolant handling, and machine services from one engineering team.

Established manufacturers

Products from specialist manufacturers, selected and supported locally from Bengaluru.

Talk to an engineer

Send a drawing, a photo of the machine or a short description of the problem. We will come back with the right solution.
