

Product catalogue

Rotary & Tilting Tables

Access more faces of the part in a single setup, with CNC rotary tables, tilting tables, support tailstocks and the workholding that goes on them.

DETRON

Overview

A fourth and fifth axis for your machining centre

A CNC rotary or tilting table turns a 3-axis machining centre into a 4- or 5-axis machine, so several faces of a component can be machined in one clamping instead of several setups.

Rotary and tilting table workholding on a VMC

Why add a rotary axis

- **Fewer setups.** Machine several faces of the part in one clamping.
- **Features stay related.** Faces machined in the same setup are not affected by re-clamping.
- **Less handling.** Fewer manual load and unload operations per part.
- **More from the same machine.** Add indexing or simultaneous rotary motion without a new machine tool.
- **Ready for fixtures.** Combine the table with a dedicated fixture, tailstock and hydraulic clamping.

The range

Detron precision NC rotary tables

CNC rotary table

A rotary (4th) axis for indexing and rotary machining on vertical machining centres.

CNC tilting rotary table

Rotation plus tilt, for compound angles and 5-face positioning of the part.

Support rotary tailstock

Supports the free end of long parts and fixtures mounted between the table and tailstock.

The complete rotary setup

Table, fixture, tailstock and hydraulics

A rotary table only performs as well as the workholding on it. SHK supplies the table together with the fixture, tailstock and hydraulic power unit, so the setup arrives as one working system.

Rotary table with dedicated fixture

Fixtures designed around the component and mounted between the rotary table and a support tailstock.

Hydraulic power unit

Supplies hydraulic pressure for clamping fixtures on the rotary axis.

Selection

What decides the right table

- Part size, weight and the faces or angles to be machined
- Indexing only, or simultaneous rotary machining
- A single rotary axis, or rotary plus tilt
- Space on the machine table and the machine travel available
- Whether a tailstock is needed to support long parts or fixtures
- Clamping method for the fixture: manual, hydraulic or pneumatic
- The CNC control and how the extra axis will be connected
- Cycle time and batch size targets

To quote quickly, send us

- ☐ Machine make, model and CNC control
- ☐ Machine table size and T-slot details
- ☐ Part drawing, or part size and weight
- ☐ Faces or angles to be machined
- ☐ Fixture or chuck required on the table
- ☐ Clamping preference: hydraulic, pneumatic or manual

How we work

From selection to support

01

Select

We review the part, the machine and the problem, and recommend the right product.

02

Supply

Equipment from established manufacturers, configured for your machine.

03

Install

Support with mounting, integration and first use on your shop floor.

04

Support

Service, spares and help when production needs change.

Start with the problem

Tell us what the machine or the part needs. We work back from the problem to the product, not the other way round.

One partner around the machine

Workholding, tooling, probing, chip and coolant handling, and machine services from one engineering team.

Established manufacturers

Products from specialist manufacturers, selected and supported locally from Bengaluru.

Talk to an engineer

Send a drawing, a photo of the machine or a short description of the problem. We will come back with the right solution.
