2. Dedicated fixtures
3. Machining centre accessories
4. Vacuum clamping
5. Enquiry and contact

Overview

Workholding designed around your component

The fixture decides how quickly a part is loaded, how rigidly it is held and how repeatably it sits from one part to the next. SHK supplies dedicated fixtures and standard clamping for vertical and horizontal machining centres.

Faster loading

Locating and clamping designed for the part cut the time the machine stands idle between cycles.

Repeatable location

Every part sits the same way, so offsets and first-off checks stay valid across the batch.

Rigid clamping

Clamping forces and support points placed where the cutting loads act.

Dedicated fixtures

Hydraulic and pneumatic fixtures

Hydraulic fixtures

High, consistent clamping force from a hydraulic power source. Suited to multi-point clamping and multi-part setups.

Pneumatic fixtures

Clamping actuated from the shop air supply, for lighter components and quick part changes.

Dedicated multi-point fixtures

Fixture bases with multiple clamping stations, built for a specific component and its sequence of operations.

Multi-operation 4-axis fixtures

Fixtures mounted on a rotary axis can carry several operations of a component at once (for example OP10 to OP40), completing them in one setup.

VMC vices and fixture clamps

Machine vices, clamps and clamping elements for general and repeat work on vertical machining centres.

Machining centre accessories

Clamping systems and accessories

Vices, clamping kits and accessories for the machining centre table, selected to the machine and the work.

Vacuum clamping

Vacuum clamping systems

Holds flat and thin parts by vacuum across the full surface, without clamps in the way of the tool.

To quote quickly, send us

- ☐ Part drawing or 3D model
- ☐ Material and the operations to be done in the fixture
- ☐ Machine make, model and table size
- ☐ Batch size and target cycle time
- ☐ Clamping medium available: hydraulic or pneumatic
- ☐ Existing fixture, if this is a replacement

Related SHK catalogues

Rotary & Tilting Tables

Rotary tables, tilting tables and support tailstocks

Mandrels & Chucks

Precision workholding for bores, gears and shaped parts

Probing & Tool Breakage

Touch probes, tool setting and breakage detection

How we work

From selection to support

01

Select

We review the part, the machine and the problem, and recommend the right product.

02

Supply

Equipment from established manufacturers, configured for your machine.

03

Install

Support with mounting, integration and first use on your shop floor.

04

Support

Service, spares and help when production needs change.

Start with the problem

Tell us what the machine or the part needs. We work back from the problem to the product, not the other way round.

One partner around the machine

Workholding, tooling, probing, chip and coolant handling, and machine services from one engineering team.

Established manufacturers

Products from specialist manufacturers, selected and supported locally from Bengaluru.

Talk to an engineer

Send a drawing, a photo of the machine or a short description of the problem. We will come back with the right solution.
