Company profile

Engineering solutions for CNC manufacturing

Workholding, tooling, probing, calibration, chip and coolant systems, reconditioning and retrofit, from one engineering partner in Bengaluru.

RESPONSIBLE ENGINEERING

Who we are

SHK Tech Services

SHK Tech Services markets and services CNC machines, related accessories and engineered products for the metal-working industry. We work from Peenya, Bengaluru, with products from established global manufacturers.

Our service is built to enhance and manage the total benefit of owning a CNC machine: from choosing the right workholding and tooling, through keeping chips, coolant and air under control, to measuring, reconditioning and upgrading the machine itself.

Vision

Value through engineering

We deliver value-added services by providing engineered products and solutions for CNC machines in the metal-working industry.

Mission

Make the solution work

- High-quality products with competitive costing and short lead times
- Strategic, win-win partnerships with customers and business partners
- A top-quality supplier and solution provider, working to international standards

Values

People. Quality. Practicality.

- Teamwork
- Customer delight
- Cost-effective solutions
- Empowering people
- Ensuring quality

Laser calibration on a machining centre, and coolant sump cleaning on a production floor

What we do

Four areas, one partner around the machine

Workholding and tooling

Rotary and tilting tables, fixtures and clamping, mandrels and chucks, tool holders, pull studs and custom angle heads.

Probing and measurement

Touch probes, tool setting and breakage detection, granite plates, clamp force and ATC alignment gauges.

Chips, coolant and clean air

Chip conveyors and compactors, sump cleaning, tramp oil separation, coolant filtration and oil mist collection.

Machine services and CAM

Laser calibration, ball-bar testing, geometrical alignment, reconditioning, subsystem retrofit and SolidCAM.

Problems we solve

Start with the problem, not the part number

When the problem is

Accuracy loss: part dimensions drifting, poor circularity or alignment

Long setups: too much time clamping, re-indexing and aligning

Difficult parts: bores, gears and complex shapes that need a better grip

Chip and coolant cost: swarf build-up, contaminated fluid, frequent sump changes

Machine stoppages: worn spindles, machine elements and ageing subsystems

More capability: another face, another axis, a better cycle

We look at

Laser calibration, ball-bar testing, geometrical alignment

Rotary and tilting tables, fixtures and clamping

Mandrels and chucks, fixtures and clamping

Chip conveyors, sump cleaning, chip compactors

Spindle and machine reconditioning, subsystem retrofit

Angle heads, rotary tables, probing, CAM

Around the machine

Nine zones of a CNC machine, covered

Every product and service we offer belongs to a zone of the machine. It is how we listen to a problem and how we find the answer.

Zone	Area	What SHK supplies and services
01	Spindle and tooling	Tool holders, pull studs, custom angle heads, spindle reconditioning
02	Probing and tool breakage	Touch probes, tool setting, breakage detection
03	Rotary axes	Rotary and tilting tables, support tailstocks
04	Fixtures and clamping	Fixtures, vices, vacuum clamping, mandrels and chucks
05	Axes and machine accuracy	Laser calibration, ball-bar testing, alignment, measuring equipment
06	Chip conveyors and compactors	Conveyors, chip and swarf compactors
07	Coolant and oil filtration	Sump cleaning, tramp oil separation, filtration
08	Oil mist collection	Air Seiki mist collectors
09	CAM and programming	SolidCAM for milling, turning and multi-axis work

The machine life cycle

From selection to second life

01 Select The right technology for the part	02 Install Integrated on the machine	03 Calibrate Geometry and accuracy verified	04 Optimise Workholding, tooling and CAM	05 Maintain Chips, coolant and clean air	06 Recondition Spindles, screws and guideways	07 Retrofit New subsystems, longer life
---	--	---	--	--	---	---

Product range

Thirteen product families

Each family has its own SHK catalogue with the range, specifications where available, and what to send us for a quote.

01 Rotary & tilting tables

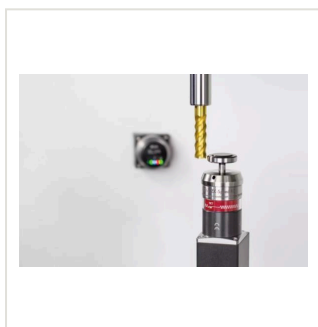

02 Fixtures & clamping

03 Tool holders & pull studs

04 Custom angle heads

05 Probing & tool breakage

06 Mandrels & chucks

07 Chip conveyors

08 Coolant, sump cleaning & filtration

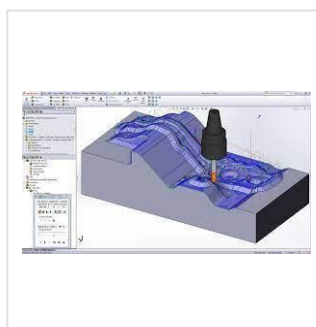

09 Chip compactors

10 Oil mist collection

11 Measuring & test equipment

12 CAM / programming

13 Ultrasonic cleaning

Cleaning solutions for machined components, specified around the part, the contamination and the throughput.

Catalogue series. Product catalogues 01 to 13 and the Machine Services catalogue are available from SHK on request.

Machine services

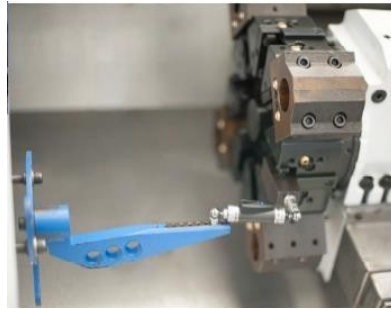

Keep machines accurate and running

Products only perform on a machine that is accurate and in good condition. SHK measures, restores and upgrades the customer's machines.

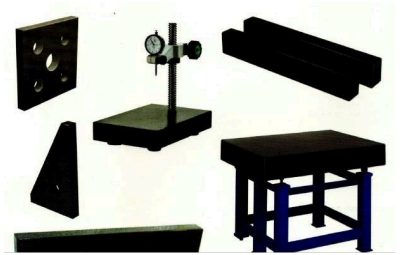

Laser calibration

Measure axis positioning errors and assess compensation.

Ball-bar testing

Investigate circularity and machine motion.

Geometrical alignment

Assess machine geometry when alignment needs attention.

Spindle reconditioning

Spindles and spindle cartridges.

Machine and axis reconditioning

Machines, subassemblies, ball screws, LM guides.

Subsystem retrofit

Retrofit of subsystems and accessories.

01

Measure

Laser and ball-bar tests for positioning and circularity errors.

For turning centres, machining centres and grinding machines.

02

Compensate

Errors corrected through compensation in the control.

03

Verify

A repeat test confirms the improvement.

Brands we work with

Technology from specialist manufacturers

DETRON CNC rotary and tilting rotary tables, support tailstocks

DIXI Custom-built angle heads

TSCHORN Probing and clamping technology, made in Germany

MARPOSS Probing and measurement

FALCON ATC alignment gauges

TAEGUTEC Cutting tools

SOLIDCAM CAM software integrated in SOLIDWORKS

VGS & CO Chip conveyors and coolant filtration systems

OILMAX Sump cleaners, tramp oil separators, chip compactors

AIR SEIKI Industrial mist filtration. SHK is an Air Seiki channel partner.

Industries

Where our customers work

Automotive

Aerospace

Die & mould

Medical

Railways

Defence

Energy

Pump & motor

Construction

General engineering

Tractor & farm equipment

Education & training

Responsible Engineering. Every recommendation starts from the customer's part, machine and problem, and is supported after it is installed.

Working with SHK

How an enquiry becomes a working solution

01 Tell us the problem Call, WhatsApp or email with the machine, the part and what needs to change.	02 We recommend An SHK engineer reviews the requirement and proposes the right product or service.	03 Supply and install Equipment configured for your machine, with support for installation and first use.	04 Ongoing support Calibration, service, spares and upgrades through the life of the machine.
---	--	---	---

What helps us respond quickly

- ☐ Machine make, model and CNC control
- ☐ Drawing or photo of the part or the machine area
- ☐ What needs to improve: accuracy, setup time, uptime, cost
- ☐ Quantities, batch size or number of machines
- ☐ Your location and preferred contact method

Start with the problem

Tell us what the machine or the part needs. We work back from the problem to the product, not the other way round.

One partner around the machine

Workholding, tooling, probing, chip and coolant handling, and machine services from one engineering team.

Established manufacturers

Products from specialist manufacturers, selected and supported locally from Bengaluru.

Talk to an engineer

Send a drawing, a photo of the machine or a short description of the problem. We will come back with the right solution.
