

Services catalogue

Machine Services

Keep CNC machines accurate and running: laser calibration, ball-bar testing, geometrical alignment, spindle and machine reconditioning, and subsystem retrofit.

Machine accuracy

Laser calibration and ball-bar testing

Ensure the positioning accuracy and circularity of the machine. Every axis is measured for errors, and the errors found can be compensated in the control.

Laser calibration and ball-bar test on a machining centre

Why	Positioning accuracy and circularity of the machine, with all axes measured for errors that can be compensated
What it improves	Uptime, productivity and quality, through assured machine accuracy and assured quality
Value	Better productivity, and assured accuracy and quality
Where	Turning, machining and grinding machines

Measure, compensate, verify

How an accuracy service runs

01

Measure

Laser and ball-bar tests measure positioning and circularity errors on each axis.

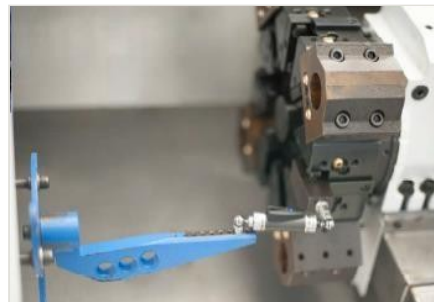

Laser calibration

Measures axis positioning errors and the compensation needed.

02

Compensate

Measured errors are corrected through compensation in the CNC control.

Ball-bar testing

Investigates circularity and machine motion.

03

Verify

A repeat test confirms the improvement.

Geometrical alignment

Assesses machine geometry when alignment needs attention.

Reconditioning

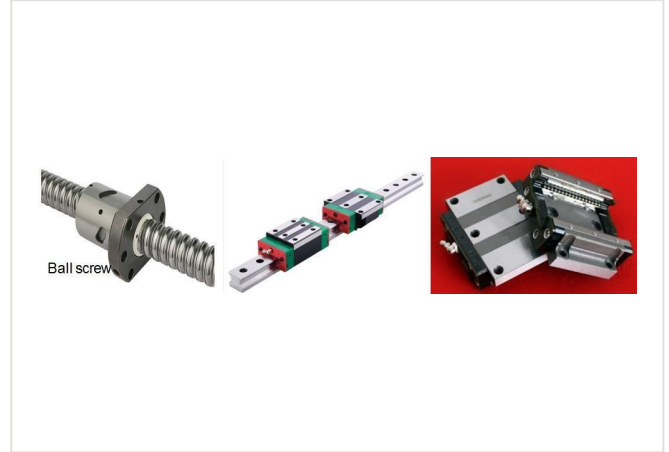

Restore performance

Partial or complete reconditioning of machines, sub-assemblies and machine elements.

Spindle reconditioning

Review and reconditioning of spindles and spindle cartridges.

Machine and axis reconditioning

Ball screws, LM guides and other machine elements, as part of partial or complete reconditioning.

Subsystem retrofit

Extend machine capability and life

Retro-fitment of subsystems and accessories to machining centres and turning centres, reviewed around what the machine needs to do next.

- Partial and complete machine reconditioning
- Sub-assemblies and machine elements
- Retro-fitment of subsystems and accessories

Where services meet products. Rotary tables, probing, coolant and chip handling can be added as part of a retrofit. See the SHK product catalogues.

To quote quickly, send us

- ☐ Machine make, model, year and CNC control
- ☐ Machine type: turning, machining or grinding
- ☐ Symptoms: accuracy, finish, noise, alarms or stoppages
- ☐ Service required, if known
- ☐ Location of the machine
- ☐ Production constraints for scheduling the visit

Related SHK catalogues

Measuring & Test Equipment

Granite plates, clamp force and ATC alignment gauges

Probing & Tool Breakage

Touch probes, tool setting and breakage detection

Rotary & Tilting Tables

Rotary tables, tilting tables and support tailstocks

How we work

From selection to support

01 Select We review the part, the machine and the problem, and recommend the right product.	02 Supply Equipment from established manufacturers, configured for your machine.	03 Install Support with mounting, integration and first use on your shop floor.	04 Support Service, spares and help when production needs change.
---	--	---	---

Start with the problem

Tell us what the machine or the part needs. We work back from the problem to the product, not the other way round.

One partner around the machine

Workholding, tooling, probing, chip and coolant handling, and machine services from one engineering team.

Established manufacturers

Products from specialist manufacturers, selected and supported locally from Bengaluru.

Talk to an engineer

Send a drawing, a photo of the machine or a short description of the problem. We will come back with the right solution.
